

**FOR IMMEDIATE RELEASE:**

## **Global Trading Platform MonetaPro Launches New Emergency Asset Management System to Aid in Pandemic Mitigation Efforts**

**"EAMS Enterprise Solution Takes the 'Guessing' Out of Supply Chain Issues During Emergencies, Pandemics & Disasters Overall"**

**(May 21, 2020 - Beverly Hills, CA)** - MonetaPro.io is an award-winning B2B, fintech platform providing efficiency in global trade. In response to the Supply Chain issues due to the Corona Virus, MonetaPro launched its Emergency Asset Management System (EAMS) today. [EAMS is a web-based disaster](#) mitigation tool that can identify, allocate and optimize key healthcare assets and related resources during a disaster. EAMS is ready to deploy on a State or Federal level.

The current pandemic has placed global healthcare resource supply chains under significant stress and has highlighted critical inefficiencies where lives are at stake. The inability to identify idle assets, provide adequate tracking, lack of transparency, and less than optimal use of vital pandemic supplies (i.e. ventilators, masks, life-saving medical equipment) has cost numerous lives. [EAMS](#) allows emergency management teams to assess available resources and materials, identify and prevent potential shortages, and reallocate assets to critical areas.

**"In emergency crisis management, there can be no delays. A system is needed to keep up with the demand fluctuations in real-time, along with helping to prevent a future crisis from sprawling out of control," says Stephen Meade, CEO & Founder of MonetaPro.**

[EAMS](#) is fully integrated with enterprise-grade IBM Blockchain technology, which provides a built-in audit trail, proof of ownership and delivery, and immediate settlement between parties. EAMS provides efficiency by reducing both economic and human costs. [EAMS](#) has further functionality with the proprietary "Crisis Credits", which allow for the tacking of cost for reimbursements. Crisis Credits could be assigned to critical agencies for purchasing items, and thus can be used to help with allocations and controls such as preventing hoarding.

The platform is live and demos are available to healthcare and disaster mitigation organizations in need.

Launched in 2017 in California, MonetaPro.io has won several fintech and blockchain startup competitions, including Fintech Zurich, Los Angeles Crypto, and the Silicon Valley d10e. MonetaPro CEO & Founder, Stephen Meade, is a successful entrepreneur, executive and advisor who has created and grown nine technology companies over the last 20 years. For more information, visit <https://monetapro.io/eams.network/>.

### **About EAMS.network**

EAMS is a web-based disaster mitigation tool that collects data on the location, availability and disbursement of resources to be used in an emergency. The system is setup to automate the processes associated with the collection and disbursement of disaster resources – all in real-time. For more information, visit [www.EAMS.Network](http://www.EAMS.Network)
