

MonetaPro

AMA FAQ

MONETAPRO.IO

**STEPHEN MEADE
MONETAPRO, LLC**

- **Have you completed Token Generation Event?**
 - Yes, the MON Token is on Ethereum Blockchain as an ERC20 Token and was created on MainNet.
- **How will Tokens be delivered?**
 - For all Token Holders, MonetaPro will deliver the appropriate number of MON Tokens to a designated wallet. We may create a MON Treasury Wallet to deliver your tokens, and then provide you with the private key to move them to your own desired storage. Alternatively, we may require the Token Holder to provide a valid Wallet address for deposit.
- **Is there a lockup on Tokens?**
 - No. As the MON is not yet listed on an exchange, there is no lockup on the trading.
- **Is MonetaPro approved on an Exchange?**
 - We currently have approval on two Exchanges and are investigating one additional exchange.
- **Has there been a Legal Opinion on the Token?**
 - Yes. A legal opinion and approval was given under the jurisdiction of Malta and as a DFA (Digital Financial Asset).
- **Who are some notable investors?**
 - Michael Terpin and his group.
- **What is the total float?**
 - There are a total of 200,000,000 MON Tokens that have been created. It will remain as a fixed amount.
- **What is the presale price?**
 - \$0.05 USD is the price that will be available in the Pre-Sale round.
- **What is the projected list price of a Token?**
 - The target price for listing on an exchange will be \$0.10 USD

- **What will you do to increase liquidity and expand the token community?**
 - MonetaPro has a plan with Publicity and PR to drive additional awareness for the global impact and implication of the platform. As one of the first Marketplace and Blockchain projects to go live in the Enterprise space, there is an interest in promoting the opportunity and success of the Company.
- **How does the MON Token differ from the GBUC (General Business Usage Credit)?**
 - The MON token is a tradable asset that can fluctuate in price based on liquidity, interest, supply and demand. The GBUC is an internal trade credit that exists only within the MonetaPro platform. It's equal to \$1 USD, and doesn't fluctuate within the MonetaPro Market.
- **Is the GBUC a Token or on the Blockchain?**
 - No, the GBUC is technically what is called a "ledger" credit, which means it exists on an internal database for MonetaPro. The GBUC is not on the Blockchain. This means there are no settlement issues, as the credits move within the system instantly. This also means the GBUC is not written to a public or private ledger, but is accounted for only internally in the MonetaPro Platform.
- **How does the MON convert to a GBUC?**
 - If you are holding a MON Token, and it was issued from the Private Round, or Pre-Sale, you have to option to "return" the MON to the Company. In exchange MonetaPro will issue you a GBUC credit, equivalent to \$1 USD. The GBUC can then be used to purchase or acquire items which may be available within the MonetaPro Marketplace.
